

For Immediate Release

An European Mobility Solution Provider Launched MVNO as a Solution, Powered by OneAsia Cloud

Hong Kong- June,1, 2016 –OneAsia, an Asian leading IT, data center and cloud solution provider, today announced that a leading European provider of communications technology and services, has launched MVNO (mobile virtual network operator) as a service in Hong Kong, supported by OneAsia Cloud.

“The mobile wholesale market is fragmented and new entries to the industry are difficult,” said the mobility solution provider, “Our vast international experience in MVNO can definitely help the new entrants. With OneAsia’s reliable cloud support, we are confident to provide excellent services to the new players in terms of our flexibility and agility.”

“The service level requirement of a Mobile Virtual Network Enabler solution (MVNE) is extremely stringent. Any downtime of the platform would be fatal to the reputation of the telecom provider. OneAsia’s mission is to gear up our partner with our managed cloud services, supported by our well-established network infrastructure and data centers,” commented *Charles Lee*, Founder and CEO of OneAsia, “We are committed to build an ecosystem facilitating the connectivity between various telecommunications providers. With the presence of some renowned carriers already in our data centers, the efficiency of inter-carrier linkage keeps improving.”

Many carriers are looking for turnkey solutions to leverage their IT and network infrastructure to offer a more comprehensive ICT solution. To answer to the market’s needs, OneAsia launched the managed cloud services in 2015. OneAsia’s world class cloud infrastructure empowers organizations to stay connected with a truly secure, robust and massively scalable processing environment that is easy to manage and expand.
